

Technical Data Sheet

AW-600A

Usage An oil emulsion specially designed to improved climbing properties of CCA treated utility poles. AW-600 works as a lubricant or "pole softener" and water repellent and is applied following treatment with CCA. Treatment with AW-600 makes it easier to drill or saw these poles than those only treated with CCA.

Description Hydrocarbon Oil Emulsion

Physical

Appearance:	Milky white liquid
Solids:	59 to 61%
pH:	7 to 9
Boiling Point:	212-216 °F
Brookfield Viscosity (cps):	35 to 200
Melting Point:	32 °F
Specific Gravity:	.89 to .92

Manufactured In United States
